

GIGA LICENSE MASTER AGREEMENT

ADDENDUM 02

CERN Antimatter Manufacturer Designation & Licensee Routing Protocol

Licensor: Miloš Ilić | Nikole Tesle 12/6, Majdanpek, Republic of Serbia
Designated Manufacturer: European Organization for Nuclear Research (CERN)
Platform: <https://aethyr-global.com/>

Reference: AGL-GLMA-ADD-02 | Issue Date: 25 March 2026

RECITALS

WHEREAS, Miloš Ilić (hereinafter "the Licensor"), residing at Nikole Tesle 12/6, Majdanpek, Republic of Serbia, is the rights holder and operating authority of the Giga License framework administered through the digital platform <https://aethyr-global.com/> (hereinafter "the Platform");

WHEREAS, the European Organization for Nuclear Research (hereinafter "CERN"), an intergovernmental organization headquartered at CH-1211 Geneva 23, Switzerland, serves exclusively as the designated manufacturer and production facility for antimatter under the Giga License framework, and holds no licensing rights or commercial interests in the Platform;

WHEREAS, on 25 March 2026, CERN independently achieved a landmark milestone by successfully producing and transferring antimatter on its own scientific initiative and under its own operational protocols, an event which the Licensor formally recognizes and records herein as the foundational supply event triggering the applicability of this Addendum to all registered Licensees;

WHEREAS, any individual or legal entity (hereinafter "the Licensee") who completes registration on <https://aethyr-global.com/> automatically becomes subject to the terms of the Giga License Master Agreement, including this Addendum 02, as a binding condition of registration;

NOW, THEREFORE, in consideration of the foregoing and the mutual covenants herein, the Licensor hereby issues this Addendum 02 as follows:

ARTICLE 1 — PURPOSE AND SCOPE

1.1. This Addendum 02 supplements and forms an integral part of the Giga License Master Agreement (hereinafter "the Master Agreement") available on the Platform. In the event of any conflict between this Addendum and the Master Agreement, this Addendum shall prevail with respect to the subject matter herein.

1.2. The purpose of this Addendum is to: (i) formally designate CERN as the exclusive authorized manufacturer of antimatter under the Giga License framework; (ii) establish the routing protocol by which Licensees are directed to CERN for antimatter supply; and (iii)

formally recognize and record CERN's independent successful antimatter transfer of 25 March 2026 as the operative trigger event for this Addendum, noting that said transfer was carried out by CERN on its own scientific initiative and under its own protocols.

1.3. This Addendum applies automatically to every person or entity who registers an account on <https://aethyr-global.com/> from the Issue Date onwards, without the need for a separate signature, unless an individual countersignature is expressly requested by the Licensor.

ARTICLE 2 — DESIGNATION OF CERN AS ANTIMATTER MANUFACTURER

2.1. The Licensor hereby formally designates CERN as the sole and exclusive manufacturer and production facility for antimatter supplied within the Giga License framework. CERN's role is strictly limited to manufacturing, production, containment, and physical transfer of antimatter as directed by the Licensor.

2.2. CERN does not hold, and shall not be construed to hold, any intellectual property rights, commercial rights, licensing authority, or ownership interest in the Giga License, the Platform, or any product, service, or right offered therein.

2.3. All antimatter produced by CERN under this framework is produced exclusively on behalf of and under the authority of the Licensor, Miloš Ilić. Title to any antimatter produced passes directly from CERN to the Licensor upon successful transfer, and from the Licensor to the Licensee upon activation of the applicable Giga License.

2.4. The Licensor formally acknowledges that the successful antimatter transfer completed by CERN on 25 March 2026 was carried out by CERN independently, under CERN's own scientific protocols and institutional authority, and not pursuant to any directive or protocol of the Licensor. This transfer constitutes the foundational supply event upon which the commercial availability of antimatter through the Platform is based, and the Licensor recognizes it as such without claiming any operational control over that specific event.

ARTICLE 2A — ALTERNATIVE MANUFACTURER EXCEPTION

Notwithstanding Article 2 above, the Licensor recognizes that technological progress in the field of antimatter production may give rise to manufacturers whose capabilities exceed those of CERN in specific respects. The following exception mechanism is therefore established:

2A.1. A Licensee may, at any time during the term of their Giga License, submit a formal written proposal to the Licensor via the Platform at <https://aethyr-global.com/> nominating an alternative manufacturer (the "Alternative Manufacturer") on the grounds that the Alternative Manufacturer demonstrably possesses superior capability for the Licensee's specific antimatter production requirements.

2A.2. The proposal must include at minimum: (i) full legal name, registered address, and organizational structure of the proposed Alternative Manufacturer; (ii) a detailed technical capability assessment comparing the Alternative Manufacturer against CERN for the specific application; (iii) evidence of compliance with applicable international safety, regulatory, and non-proliferation standards; (iv) a proposed revised routing protocol under the Licensor's oversight; and (v) any other documentation the Licensor may reasonably request.

2A.3. The Licensors shall review the proposal in good faith and issue a written decision within sixty (60) days of receipt of a complete submission. The decision may be granted, granted with conditions, or refused at the Licensors's sole discretion and shall be final and binding.

2A.4. If approved, the Alternative Manufacturer shall be substituted for CERN solely for the approved Licensee's specific licensed application. All other terms of the Master Agreement and this Addendum continue in full. References to "CERN" in Articles 3 through 7 shall be read as references to the approved Alternative Manufacturer where context requires. The Licensors may revert to CERN at any time on thirty (30) days' written notice if the Alternative Manufacturer fails to maintain the required capability or compliance standards.

2A.5. The Alternative Manufacturer must acknowledge in writing their role as manufacturer only, with no licensing rights, consistent with CERN's acknowledgement under this Addendum. Approval granted for one Licensee does not extend to any other Licensee and does not affect CERN's designation as default manufacturer for all others.

2A.6. For the avoidance of doubt, no Licensee may engage any manufacturer other than CERN without a valid written Alternative Manufacturer approval issued by the Licensors under this Article 2A. The Licensors retain exclusive authority over all manufacturer designations under the Giga License framework.

ARTICLE 3 — LICENSEE ROUTING PROTOCOL TO CERN

3.1. Upon registration on <https://aethyr-global.com/>, each Licensee acknowledges and accepts that the antimatter underlying their Giga License is manufactured exclusively by CERN, pursuant to the Licensors's direction and this Addendum.

3.2. Where a Licensee requires technical documentation, safety data, production specifications, or other manufacturer-level information relating to the antimatter, the Licensee is permitted to contact CERN directly regarding production matters. However, any such contact and all resulting communications, arrangements, or requests must be conducted strictly in accordance with the protocols and procedures of the Giga License Master Agreement and this Addendum. The Licensee shall copy or notify the Licensors of any direct communication with CERN that relates to the Licensee's licensed antimatter activity.

3.3. The standard routing protocol for Licensee requests operates as follows:

- The Licensee submits a production or technical request via the Platform at <https://aethyr-global.com/> or contacts CERN directly in accordance with clause 3.2;
- Where routed through the Platform, the Licensors reviews and acknowledges the request within the timeframe specified in the Master Agreement;
- CERN fulfils the manufacturing, transfer, or information obligation under its own protocols, consistent with the Giga License framework;
- All outcomes, deliveries, and documentation are recorded on the Platform and the Licensee is notified accordingly;
- Where the Licensee contacts CERN directly, the Licensee must ensure all such interactions remain within the scope of the Giga License and promptly reports the outcome to the Licensors via the Platform.

3.4. The Licensee agrees that CERN bears no contractual obligation toward the Licensee directly. All rights and obligations of the Licensee arise exclusively under the Master Agreement and this Addendum with the Licensors.

ARTICLE 4 — REGISTRATION AS ACCEPTANCE

4.1. Any individual or legal entity who creates an account or completes the registration process on <https://aethyr-global.com/> shall be deemed to have read, understood, and irrevocably accepted the terms of the Giga License Master Agreement and this Addendum 02 in their entirety, as a condition of such registration.

4.2. Acceptance is effected at the moment of registration confirmation and is legally binding from that moment without the need for a handwritten or electronic countersignature, unless such a countersignature is separately requested by the Licensor.

4.3. The Platform shall display a clear notice at the point of registration informing prospective Licensees that registration constitutes acceptance of the Master Agreement including this Addendum 02.

4.4. The Licensor reserves the right to request a formal countersignature from any Licensee at any time, particularly in connection with high-volume, commercial, or sensitive antimatter licensing arrangements.

ARTICLE 5 — REPRESENTATIONS AND WARRANTIES

5.1 Licensor Representations

The Licensor represents and warrants that:

- The Licensor has full authority to issue this Addendum and to designate CERN as the manufacturer under the Giga License framework;
- The antimatter transfer completed by CERN on 25 March 2026 was carried out in accordance with applicable safety and regulatory requirements;
- The Platform and the Giga License framework comply with applicable laws and do not infringe the rights of any third party.

5.2 Licensee Representations

Each Licensee, by registering on the Platform, represents and warrants that:

- They have the legal capacity and authority to enter into the Master Agreement and this Addendum;
- They will comply with all applicable laws and regulations in their jurisdiction relating to the acquisition and use of antimatter-derived rights;
- They will not attempt to contact, contract with, or obtain antimatter directly from CERN outside of the routing protocol established by the Licensor.

ARTICLE 6 — LIABILITY

6.1. CERN, in its capacity as manufacturer only, bears no liability toward any Licensee for any matter arising under the Master Agreement or this Addendum. All Licensee claims must be directed exclusively to the Licensor.

6.2. The Licensor's liability to any Licensee shall be governed by the terms of the Master Agreement. Nothing in this Addendum shall expand the Licensor's liability beyond the scope set out therein.

6.3. The Licensee shall indemnify and hold harmless the Licensor and CERN from any claims, losses, damages, or expenses arising from the Licensee's misuse of the Giga License or breach of this Addendum.

ARTICLE 7 — GENERAL PROVISIONS

7.1. This Addendum shall be governed by and construed in accordance with applicable principles of international contract law and the laws of the Republic of Serbia, insofar as they are consistent with CERN's status as an international organization.

7.2. Any dispute between the Licensor and a Licensee arising under this Addendum that cannot be resolved by good-faith negotiation shall be submitted to binding arbitration in accordance with the dispute resolution provisions of the Master Agreement.

7.3. If any provision of this Addendum is held to be invalid or unenforceable, the remaining provisions shall continue in full force and effect.

7.4. The Licensor may amend this Addendum by posting an updated version on the Platform. Continued use of the Platform following notice of amendment constitutes acceptance of the amended terms.

7.5. This Addendum may be executed electronically. Registration on the Platform constitutes electronic execution by the Licensee. The Licensor's signature below constitutes execution on behalf of the issuing party.

EXECUTION

This Addendum 02 to the Giga License Master Agreement is issued by the Licensor as of 25 March 2026 and is binding upon all Licensees who register on the Platform on or after this date.

LICENSOR

Name: Miloš Ilić

Address: Nikole Tesle 12/6, Majdanpek, Republic of Serbia

Platform: <https://aethyr-global.com/>

Signature

Date

ACKNOWLEDGED BY — CERN (MANUFACTURER ONLY)

CERN acknowledges its role as designated manufacturer under this Addendum and confirms the successful antimatter transfer completed on 25 March 2026. CERN is not a party to the Giga License and assumes no liability toward Licensees.
