

ADDENDUM NO. 1

TO THE TERMS AND CONDITIONS

File Delivery & Effective Date Protocol

Issued by: Miloš M. Ilić — aethyr-global.com

Date: March 15, 2026

This Addendum is incorporated by reference into and forms an integral part of the original “Terms and Conditions — File Delivery & Effective Date Protocol” published at aethyr-global.com.

1.1 Network Node Participation Reward (New Clause)

Upon successful completion of the Upload Event and verification of a fully executed License Agreement, the Licensee shall automatically receive a percentage ownership stake in the Aethyr Network Cryptographic Intelligence (Node Value).

The exact percentage shall be determined by the type of license signed (GIGA, SMALL, or other) and shall be calculated as a proportional share of the total economic value generated by the licensee.

This stake is granted in addition to any other rights under the main License Agreement and is non-transferable except with Licensor’s prior written consent.

1.2 Permanent Chain State Archiving & Non-Continuous Operation

The Licensee acknowledges that the Aethyr Network maintains a complete and permanent record of the entire chain state through IPFS CID archiving, publicly available at:

<https://archive.org/details/cid-history>

As a result, the Aethyr node/server is not required to operate continuously. The full chain history can be recovered and bootstrapped at any time from the archived CIDs using the official recovery protocol (recover.js). This design ensures long-term resilience, eliminates the need for uninterrupted server uptime, and guarantees that the network state remains fully preserved even during extended offline periods.

All other provisions of the original Terms and Conditions remain unchanged and in full force.

Accepted and Agreed:
